

Neuroinflammation

Principal Scientist/Sr. Scientist/Scientist (multiple openings):

We are currently seeking highly self-motivated and talented immunologists and neurologists to join our neuroinflammation group. Individuals will work closely with other members of the GSK R&D China team to identify novel molecules for the treatment of multiple sclerosis and other neurodegenerative diseases.

Responsibilities include:

- Identify, characterize and evaluate immune cells targets for multiple sclerosis.
- Execute validation experiments in EAE animal disease models.
- Develop cellular assays for neuroprotection.

Requirements:

- PhD/MS in immunology or neurosciences.
- Strong organization, data management, and communication skills.
- Ability to work effectively in a team environment.
- Possess relevant technical expertise and lab skills, and troubleshoots problems in the execution of experimental / technical processes with minimal supervision.
- Experience in EAE animal models and an understanding of the drug discovery/development process is a plus.
